README

NES Snake This project is my first attempt to write a simple NES Snake game using Shiru's NESLibrary, based on the CC65 project. You can find out more about Shiru's NESLibrary here: http://shiru.undergrund.net/articles/programming_nes_games_in_c.htm Also, if you are interested in the general CC65 project, you can find it here: <http://www.cc65.org/> Or just visit the project directly on GitHub: <https://github.com/cc65/cc65>

Array which indicates collisions with items (0 = no collision, 1 = collision). E.g. [0]=1 means, that the snake collided with the first element.

4.2.1.3 item_coordinates

```
unsigned char item_coordinates[ITEM_MAX_ON_SCREEN<< 1]
```

Array of item coordinates (pixel based) two elements are a coordinate set, eg. [0] is the x-coordinate of the first item and [1] its y-coordinate.

- the 4. and 5. element are assigned to the first and last body element of the snake
- the last array-element needs to be the VRAM end-of-file-indicator NT_UPD_EOF.

Only two body elements need to be updated once per frame:

- The new first body element needs to be drawn
- The old last body element need to be disabled

5.13.2 Function Documentation

5.13.2.1 calc_random_item_position()

```
void calc_random_item_position (  
    void )
```

This function calculates the coordinates of an grow-item. It stores the calculated coordinates into global fields 'coord_x' and 'coord_y'. In terms of the game structure, this function should be placed in file '[update.c](#)'. But since I would like to spawn the initial items randomly as well, this function needs to placed in file '[init.c](#)'.
